FarrowTech

intelligent management in the
farrowing pen

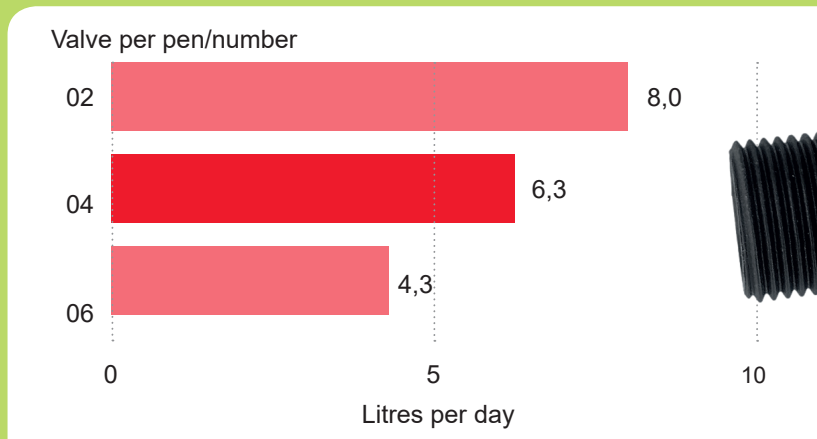

FarrowFlow

- is a wireless flow sensor, which measures the water intake of each individual nipple drinker

Knowing the water intake for farrowing sows or newly weaned piglets is a tool for improving management decisions.

Supplied with couplings for 8 mm or 15 mm PE tubing, installation directly on the inlet to the drinking water cup can be done in a matter of seconds.

The collected water data can be visualized by any FarmLink compatible management system.

item number: 1411-5005

FarrowMat

- is a 40° thermostated heating mat for newborn piglets

FarrowMat is a robust and energy efficient heat mat developed for use in farrowing crates. Placed behind the sow, it keeps a constant temperature of 40°C and ensures heat for all piglets during the first critical hours. FarrowMat contains a 300 W heating element and consumes typically only 1,5 kWh during 12 hours of use. Size: 35 cm × 85 cm × 5 mm.

- provide a perfect start
- reduce mortality

item number: 1411-5002

FarrowCam

- the tool for the professional pig farmer to reduce stillborn piglets

FarrowCam is a patented system for automatic monitoring of farrowing sows. The system uses artificial intelligence for automatic birth detection and provides an overview of all farrowings on a smartphone.

A notification is given when long birth intervals are detected. This enables precise and effective obstetric aid using a minimum of working time.

On an average farm in Denmark, 1,8 piglets per litter are stillborn. Trials with FarrowCam show that the system is able to save half of these piglets.

FarrowCam requires no fixed installations and it comes with a universal clamp mount and a smart charging rack. It is simple and fast in use and easy to clean.

item number:
1411-5001

FarrowTherm

- is a wireless temperature sensor for installation, for example, in the piglets nest area

In addition to displaying the temperature, it can also be used with FarmLink to control heating lamps or ventilation to ensure the right temperature.

The collected data can be visualized by any FarmLink compatible management system.

item number: 1411-5004

FarrowLink

- smart wireless connection of sensors and controllers

FarrowLink is a family of wireless sensors and control units that gives you detailed information about the individual animals and enables smart control of the farrowing barn.

It's easily installed in the barn without the need for electricians or other professionals.

The system is controlled via the FarrowTech app or any other FarmLink compatible management system.
